# City of Wendell Consumer Confidence Report 2021

The city of Wendell routinely monitors for contaminants in your drinking water in accordance with federal and state regulations. Please review the table to learn about your drinking water quality for the period of January 1, 2021 through December 31, 2021.

## Potential Contaminants
Inorganic contaminants: salts and metals, naturally-occurring or resulting from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or agriculture.

Pesticides and herbicides: may come from agriculture, urban storm water runoff, and residential uses.

Microbial contaminants: viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Organic chemical contaminants: by-products of industrial processes and petroleum production, also from gas stations, urban storm water runoff, and septic systems.

Radioactive contaminants: naturally-occurring or the result of oil and gas production and mining activities

## Drinking Water Regulations

**AL (Action Level):** The concentration of a contaminant which, when exceeded, triggers treatment or other requirements

**MCL (Maximum Contaminant Level):** The highest level of a contaminant allowed in drinking water.

**MCLG (Maximum Contaminant Level Goal):** The level of a contaminant in drinking water below which there is no known or expected risk to health.

**MRDL (Maximum Residual Disinfectant Level):** The level of a disinfectant allowed in drinking water.

**MRDLG (Maximum Residual Disinfectant Level Goal):** The level of drinking water disinfectant below which there is no known or expected risk to health.

## Units of Measurement

- **Parts per billion (ppb):** equal to one minute in 2,000 years
- **Parts per million (ppm):** equal to one penny in $10,000
- **Million fibers per liter (MFL):** measures asbestos concentration
- **Micrograms per Liter (ug/L):** measures a contaminant in water

## For more information about contaminants and potential health effects, contact EPA’s Safe Drinking Water Hotline at 1-800-426-4791 or the website, www.epa.gov/safewater/hotline/
Some people may be more vulnerable to contaminants in drinking water than the general population. These individuals can include:

- persons undergoing chemotherapy
- persons who have undergone organ transplants
- people with HIV/AIDS or other immune system disorders
- Elderly individuals
- infants and young children

These individuals should consider seeking advice from a health care professional.

Where does my drinking water come from?
The city of Wendell distributes drinking water from two groundwater wells (Boise St Well and Lewiston St Well). After collection, your drinking water is treated by disinfection. Disinfection involves the use of chlorine and other disinfectants to remove potentially harmful microorganisms and bacteria from your water.

As water travels through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk.

Reduce Your Water Bill!
- Take short showers - a 5 minute shower uses 4 to 5 gallons of water versus 50 gallons for a bath.
- Shut off water while brushing your teeth and shaving and save up to 500 gallons a month.
- Use a water-efficient showerhead to save you up to 750 gallons a month.
- Run your clothes washer and dishwasher only when they are full to save up to 1,000 gallons a month.
- Fixing or replacing leaky toilets and faucets can save up to 1,000 gallons a month.
- Adjust sprinklers so only your lawn is watered. Apply water during the cooler parts of the day to reduce evaporation.

Notice: Lead in Home Plumbing
Elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily associated with service lines and home plumbing. The city of Wendell cannot control the variety of materials used in plumbing components. You can minimize the potential for lead exposure by flushing your tap for up to 2 minutes before using water. If you are concerned about lead in your water, you may wish to have your water tested.

Arsenic in Drinking Water
While your drinking water meets EPA’s standard for arsenic, it does contain low levels of arsenic. EPA’s standard balances the current understanding of arsenic’s possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

Water Quality 2021
In 2021, sampling indicated an excess of di(2-ethylhexyl) phthalate in the drinking water. Some people who drink water containing di(2-ethylhexyl) phthalate well in excess of the MCL over many years may have problems with their liver, or experience reproductive difficulties, and may have an increased risk of getting cancer.
